Innovative storage solutions
for industrial racking and
shelving requirements

ADDMORE International

Addmore International is a forerunner in innovative storage solutions across UAE. Quality and time-bound services has earned us the trust of several commercial and industrial partners.

Progress Through Inclusion

To expand our footprint in the industry, we get indulged with our customers, understand their requirements and put best efforts to deliver nothing but the best. We do a quick research and development in process and product portfolios that help us tackle the changing requirements of the competitive markets. Whether you want Heavy Duty Pallet Rack, Industrial Rack, Mezzanine Floor, Shelving Rack, Pallet Racking, Pallet Racking System, Heavy Duty Storage Rack, Industrial Storage Rack, Heavy Duty Steel Rack or Warehouse Racks, we are counted as the best to bring forth unmatched quality at competitive market prices.

Dedicated For Your Satisfaction

Our team is dedicated to designing excellent solutions that provide our clients strong, safe and top-quality racking systems as promised. We carefully hear your requirements and provide customized racking systems, according to the need of your business. Over the years, we have been serving our advanced racking systems to Warehouse, Manufacturing Units, Industrial Facilities, Pharmaceutical Sectors, and many other industries. Today, we are considered the best among top Warehouse Storage Racks Suppliers in UAE. Explore our racking systems and reach us to discuss things further.

Vision

To revolutionise the storage solution industry with unmatched quality of production and service delivery.

Mission

Scale our prowess in storage solutions to be a significant driving force in the innovative and creative direction of the changing world.

Products

Choose from a wide range of organizing systems that help optimise your warehouse space and efficiency

- Heavy Duty Racking System
- Steel Structural Mezzanine Floors
- Two tier Racking System
- Rack Supported Mezzanine Floor
- Bolt Free Shelving
- Medium Duty Racking,
- Carpet Storage Racking
- Slotted Angle Shelving
- Long Span Racking
- Tyre Racking System
- Galvanised Racks
- Double Deep Pallet Racking
- Cantilever Racking
- Drive-In Pallet Racking
- Very Narrow Aisle Pallet Racking

Heavy-duty rack system

A heavy-duty racking system refers to a specialised storage solution designed to accommodate and support large, bulky, or heavy items in warehouses, factories, or industrial settings. It typically consists of robust steel or metal frames and beams that are capable of withstanding substantial weight loads. These systems offer high load-bearing capacity, durability, and efficient use of vertical space, allowing for organised and safe storage of heavy items such as pallets, machinery, equipment, or materials. Heavy-duty racking systems are commonly used to optimise storage space and facilitate easy access and retrieval of goods in industrial environments.

Steel Structural Mezzanine Floors

Steel Structural Mezzanine Floors are used for applications ranging from storage to light assembly and office uses. They effectively capitalise on the cubic volume of a building, freeing up ground-floor areas. The structures are manufactured to suit individual requirements and are delivered to the site pre-fabricated, enabling rapid on-site installation. Mezzanines can be erected in single, double, or multi-tiers and at differing floor heights, which makes them suitable for commercial retail, warehousing, and virtually any type of production.

Two-tier rack System

A two-tier racking system enables easy loading and unloading of items in storage. It is a reliable storage structure. The two-tier arrangement makes good use of warehouse height.

Two-tier storage systems are distinctive in their design and are frequently utilised by industries and warehouses when space is at a premium and vertical space is available for storage.

Rack-supported mezzanine floors

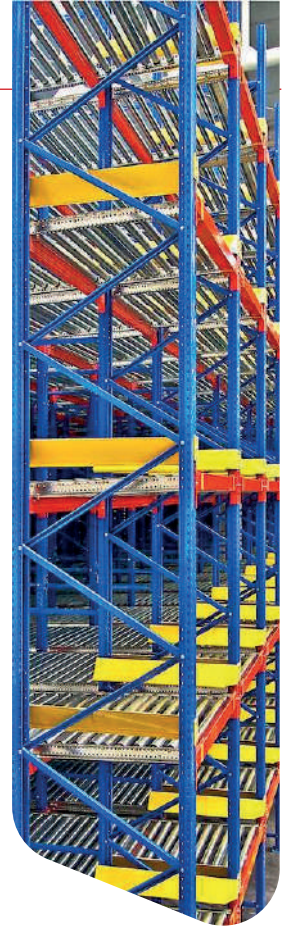

Rack-supported mezzanine floors are an ideal solution to create an open floor space above shelving or racking system that can be used for bulk storage or additional shelving. A floor-over-racking system is simply an area above shelving or racking accessed by a staircase. A rack-supported mezzanine floor is the fastest way to add and use additional floor space within the shell of an existing building.

Bolt-free shelves

The ease of the shelving installation and simple adjustment come from the unique friction steel clip, which simply connects the robust shelf design to the upright profiles. A fully adjustable, clip-together, bolt-free shelving system easily adapts to your changing needs.

Medium-duty racks

A medium-duty rack system is a low-cost solution for properly using accessible spaces and having fast access to all stored goods. The medium-duty rack system is ideal for storing small and medium-sized items. It is available in a variety of lengths, depths, and heights, so it will satisfy all of your storage requirements. All of these plans provide numerous advantages to customers, including a safe medium-duty rack system, a lifetime product, and an easy-to-move product from one location to another.

Carpet Storage Racking

Carpet Racking is achieved by using heavy-duty long-span racking structures in either a 2- or 3-bay deep configuration to suit the length of the carpet rolls. Decks are then installed, running from front to back, spanning the racking beams to support the carpet. Carpet Storage Racks can be used to create storage sections suitable for carpet rolls up to 6 metres in length and to allow the carpets to be stored using a forklift truck.

Slotted Angle Shelving

Slotted Angle Shelving provides simple, cost-efficient solutions for virtually any storage requirement. The unique punched hole patterns allows multiple steel sections to be bolted together to form sturdy shelving and storage systems. Slotted angle structures provide one of the most versatile and economical shelving systems available. It comes in a wide range of heights, depths, and lengths.

Long-Span Racking

Long-Span Racking is a strong, durable, versatile, and economical shelving system, making it ideal for a wide variety of applications, from small parts to large or heavy goods. Long-Span Racking incorporates a wide range of beams and frames, making it easy to customise it to your precise storage needs with different types of decking. This system also makes optimal use of the warehouse heights.

Tyre Racking System

Tyre rack Systems are the most efficient, cost-effective, and safe way of storing tyres. It maximises floor space and creates a neat and tidy solution to all of your storage needs. Tyre racks are designed to provide easy access to and display of various tyre sizes. The systems are fully adjustable and can be supplied in various heights and lengths to suit your requirements. The tyre rack system can also be used in a multi-tiered configuration to maximise space.

Galvanised Racks

Heavy Duty Galvanised, corrosion-resistant racking units are used for potentially high-humidity environments, like coolers and freezers in outdoor areas. The dip-galvanised coating has great resistance to corrosion and is composed of high-strength steel. This modular shelving system can be expanded to many levels and sizes using basically the same components. Heavy-duty galvanised racking is perfect for use in cold stores or damp environments.

Double Deep Pallet Racking

By simply storing the pallets at two depths rather than one, as with the adjustable pallet racking system, double-deep pallet racking systems maximise the amount of storage space that is accessible for storage.

Here, the two pallets are accessible from the same aisle, cutting the number of aisles in half.

In essence, by reducing aisles and boosting storage places, double-deep pallet racking increases warehouse storage density.

Cantilever racks

The ideal solution to store long and oversized goods is Cantilever Racking. It is perfect for the storage of packs of timber, steel bars, tubes, and long-length goods. It is available in both single-sided and double-sided configurations. The double-sided rack provides maximum storage capacity on a single central column, while the single-sided rack's adjustable arms provide excellent flexibility for changing stock.

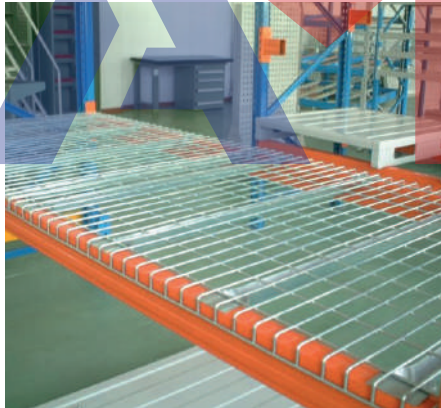

Drive-In Pallet Racking

Drive-in racking systems provide an option to store huge quantities of the same product in high-density storage facilities. To pack containers more effectively, installing this storage system is a good option. The facility's storage capacity could be expanded to ensure better functionality.

Very Narrow Aisle Pallet racks

Very Narrow Aisle Pallet Racking (VNA) is a different version of adjustable pallet racking systems that has been consolidated into a very tiny area, resulting in a high-density storage system that allows the warehouse capacity to be increased without expanding the space. Despite its small size, very narrow aisle pallet racking is a versatile system since the height and depth of the racking may be adjusted to meet the needs of the customer. It also makes good use of the warehouse's considerable height.

Deckings

- Drop over panel decking
- Plywood decking
- Wire mesh decking
- GI gratings decking

Rack components and accessories

- Galvanized Gratings
- Upright Post
- Box Beam
- Steel Grating
- Metal Floor Plain
- Perforated Metal
- Floor Plan
- Standard
- Heavy Duty
- Barrier Protector
- UBP Base Plate
- TBP Base Plate
- C-Channel Base Plate
- Center Support
- Heavy Duty Metal
- Shelve
- Mesh Decking
- Sport Rim Stopper
- HDF Board/Plywood/Cement Board
- Placon Roller
- Checker Plate
- Frame
- Joint
- Row Sign
- PJ Anchor
- Drum Stopper
- Mesh Fencing
- Pallet Stopper
- Wall Joint
- Frame Joint/Wall Joint

Services

- Design and Installation
- Custom-sized racks and shelving
- Dismantling and Relocation of the Racking System
- Racking Inspection Services

Delivering excellence and quality!

At Addmore, we are committed to delivering racking and shelving services while maintaining the finest quality, professionalism, and reliability. Addmore is a trailblazer in the field and has contributed innovative solutions for the ever-evolving requirements of the industry.

Why choose Addmore International LLC?

- Experience and expertise in the industry
- Customised storage solutions
- Quality and durability of the products
- Execution of services within the prescribed time frame
- Customer satisfaction
